Hiring Team
BlueLabs

Dear Hiring Team,

I am writing to apply for the Data Analyst I position at BlueLabs. I'm interested in this role because it combines the parts of data work I enjoy most: cleaning and validating data, finding patterns, supporting predictive models, building clear visuals, and turning analysis into something useful for decision-making. BlueLabs stood out to me because the work is not just technical in isolation; it supports clients working on real analytical, strategic, and social problems.

My background is in computer science, Python, SQL, statistics, machine learning, and reproducible data workflows. In my Custom ML Benchmarking Suite, I built a framework to compare k-NN, Random Forests, and Neural Networks across multiple datasets using normalization, k-fold cross-validation, accuracy/F1 evaluation, and Matplotlib reporting. The project helped me develop stronger habits around model comparison, clean outputs, and avoiding one-off results.

I also built a Song Recommender API using Python, FastAPI, PostgreSQL, SQLAlchemy, scikit-learn, and Docker. I created an offline indexing pipeline with StandardScaler, optional PCA embeddings, and cosine nearest-neighbor retrieval, while preserving feature-order metadata so results stayed reproducible across runs. That project strengthened my ability to work with structured data, design reliable data contracts, and troubleshoot output quality when inputs change.

Beyond modeling, I have experience building PostgreSQL-backed systems with validation rules, documented APIs, and reporting-style queries. In my Longitudinal Lesion Tracking REST API, I designed a normalized schema, added constraints to prevent inconsistent records, and built 26 endpoints to support CRUD operations, nested reads, and analytics-style access patterns.

I would be excited to bring my Python, SQL, modeling, visualization, documentation, and data-quality mindset to BlueLabs. I'm especially drawn to the opportunity to learn from experienced analysts and data scientists while contributing to fast-moving, client-facing analytics work. Thank you for your time and consideration.

Sincerely,
Adam Danicki
